Whispering Pines Runway Mowing Schedule

Please check the schedule below and see what times are good for you. Call or e-mail Jeff to get on the schedule.

If you haven't had training already, please contact Don Powell to get training on the mower. I've scheduled 3 days around the weekends to allow for schedule and weather changes.

Mower operators don't forget our runway mowing procedure. Don Powell has a blinking light on the tractor which helps alert of the tractor's presence. Mowers should maintain situational awareness and be looking out for planes landing. Landing planes should look out for mowing on the scheduled weekends. The tractor cannot always see a landing plane. Pilots should wait for the mower to move off the landing area. A low pass may be necessary to warn the mower if your landing intentions are not clear to them. Any other ideas for increasing runway safety are appreciated.

Be aware that the runway area includes the grass on the East side of the paved runway. Tail draggers often land in the grass so when you see a plane landing , also move off the grass runway to give them right of way. Stop the tractor and face toward the lake so the pilot is aware that you can observe them landing.

Thanks for your help for this season's mowing!
